Insert after the claims ABSTRACT OF THE DISCLOSURE

A packaging includes three layers of material adhered together, the middle layer  
has at least one portion removed, defining a void inside the packaging. The three  
layers are the same size and shape. Partial cut-lines extend width ways through all

layers, at the edge of the packaging, to aid opening. A further perforation may be applied to the two outer layers, substantially bridging the gap between the outer cuts. The first layer of the packaging is initially not completely joined to the middle layer, and can be folded back about a fold line, to allow insertion of an object before closing. A tapered gap may be provided in the edge of the middle layer, connecting to the removed portion. One of the outer layers may be provided with a printed, perforated portion, overlying the void space in the middle layer. A method of producing said packaging comprises removing at least a portion from one of three layers, and laminating or bonding the layers together with said altered layer in the middle. The three layers may be provided as a single blank, and folded to position them on top of one another, the blank being pre-cut with the removed portion of the middle layer.
